efficient algorithms for decoding reed-solomon codes with erasures todd mateer abstract—in this paper, we
present a new algorithm for decoding reed-solomon codes with both errors and erasures. **reed-solomon
codes - eecs.harvard** - reed-solomon codes reed-solomon codes in these notes we examine reed-solomon
codes, from a computer science point of view. reed-solomon codes can be used as both error-correcting and
erasure codes. **generalized reed-solomon codes - usersthu** - generalized reed-solomon codes in 1960, i.s.
reed and g. solomon introduced a family of error-correcting codes that are doubly blessed. the codes and their
generalizations are useful in prac-tice, and the mathematics that lies behind them is interesting. in the rst sec-
tion we give the basic properties and structure of the generalized reed-solomon **art sklar7 reed-solomon
revised - pearsoncmg** - reed-solomon codes by bernard sklar introduction in 1960, irving reed and gus
solomon published a paper in the journal of the society for industrial and applied mathematics [1]. this paper
described a new class of error-correcting codes that are now called reed-solomon (r-s) codes. these codes have
great power and utility, and are today found ... **error detection and correction using reed solomon codes**
- reed solomon codes may be shortened by (conceptually) making a number of data symbols zero at the
encoder, not transmitting them, and then re-inserting them at the decoder. rs are block codes and are
represented as $rs(n, k)$, where n is the size of code word length and k is the number data symbols, $n - k = 2t$
is the number of parity symbols ... **reed solomon encoder and decoder - rutgers university** - the reed-
solomon code generator polynomial used was based off of the $n=255, k=239$ code. in most testing the code
was shortened to $n=32, k=16$ via code shortening (populating the initial 239-16 symbols with zeros). software
implementation of the reed-solomon encoder and decoder, and additionally parts of the **reed solomon
